### **DETAILED ACTION**

Applicant's election of Group I, claims 5-10 in Paper No. 4 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### ***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the limitation that the metal plate has different thicknesses, material compositions must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 5, 6, 8, 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Riemenschneider in view of Stoner. The patent to Riemenschneider teaches structure substantially as claimed including a sheet metal pallet including stiffening ribs the only difference being that the pallet does not include areas of different thicknesses or compositions. However, the patent to Stoner (at fig. 4) teaches the use of different thicknesses at different locations of a pallet that provides varying degrees of strength. It would have been obvious at the time of the invention to modify the structure of Riemenschneider to include a different thicknesses, as taught by Stoner since such structures are conventional structures used in the same intended purpose of providing different degrees of strength at different portions of a structure thereby providing structure as claimed.

Claims 7, 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Riemenschneider in view of Stoner as applied to the claims above, and further in view of Aberg. The patent to Riemenschneider in view of Stoner teaches structure substantially as claimed as discussed above including a metal sheet pallet, the only difference being that there are not additional plates to provide varying degrees of strength and stiffness. However, the patent to Aberg teaches the use of additional plates to provide strength to be old. It would have been obvious and well within the level of ordinary skill in the art at the time of the invention was made to modify the structure of Riemenschneider to include additional plates since such structures are used

in the same intended purpose of providing additional strength and rigidity thereby providing structure as claimed.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Jencks, Powell, Clark, Johnson, Morrison, Andreini et al, Fleming et al, Schleicher et al, Schleicher teach structure similar to applicant's.
